Define Problem Statements :

Raising Waters: AI-Powered Flood Prediction and Early Warning System

To design and develop an AI-driven flood prediction system that integrates real-time weather data, employs machine learning models for accurate forecasting, and provides early warnings through an intuitive dashboard, thereby reducing flood-related losses and enhancing community resilience.

Example:

Problem Statement (PS)	I am (User)	I'm trying to	But	Because	Which makes me feel
PS-1	A disaster management officer at a state emergency response center	Monitor flood-prone areas and issue timely warnings to vulnerable communities	I don't have access to real-time, integrated weather data from multiple sources	The data is scattered across different agencies (IMD, satellite, local sensors) and arrives in different formats with delays	Frustrated and helpless, knowing that lives are at risk due to delayed warnings
